

Android Browser Demo — pilna santrauka

Handoff dokumentas kitam AI / developeriui · 2026-06-23 · Kantrybės demo projektas

1. Projekto tikslas

Leisti lankytojams **naršyklėje** išbandyti Android aplikacijas (**Dishcovery**, **DJ Book**) be fizinio telefono — per **redroid** emuliatorių + **ws-scrpy** stream'ą, hostinama **Hetzner VPS**, integruota į portfolio **kantrybes.lt/dev**.

2. Infrastruktūra

Kas	Detalės
VPS	Hetzner CX23, Helsinki, IP 135.181.39.195, Ubuntu
SSH	root@135.181.39.195, raktas Mac ~/.ssh/id_ed25519
Serverio kelias	/opt/android-demo/
Reverse proxy	Caddy (/etc/caddy/Caddyfile)
Docker	2 atskiri stack'ai (Dishcovery + DJ Book)

URL'ai

App	URL	Portai (localhost)
Dishcovery	https://demo-dishcovery.kantrybes.lt	redroid 5555, ws-scrpy 8001
DJ Book	https://demo-djbook.kantrybes.lt	redroid 5556, ws-scrpy 8002
IP fallback	http://135.181.39.195	tik Dishcovery

Auth: demo / dishcovery2026 (tiesioginis apsilankymas)

Embed: /embed/ — be auth (iframe iš portfolio)

DNS

- demo-dishcovery.kantrybes.lt → A → 135.181.39.195
- demo-djbook.kantrybes.lt → A → 135.181.39.195
- www.kantrybes.lt → Railway (portfolio), ne VPS
- Buvo DNSSEC problemų domreg.lt — reikėjo išjungti Let's Encrypt'ui

3. Repo struktūra

GitHub: github.com/tkestas92/android-demo

```
android-demo/
├─ apps/dishcovery/      # docker-compose, scripts, www/index.html
├─ apps/djbook/
├─ Caddyfile
├─ demo-reset-server.py # :9003
├─ demo-reset.service
├─ watch-adb.sh
└─ agent-prompt.md
```

Portfolio: github.com/tkestras92/kantrybes — LiveDemoModal.tsx, lib/liveDemo.ts

4. Demo stack'as (vienas app)

docker-compose.yml

- **redroid** — Android 13 x86_64, 720×1600, DPI 280, Pixel 9 props, ./redroid-data:/data
- **ws-scrpcy** — ghostry/ws-scrpcy, custom index.html mount

ADB

- connect-adb.sh: adb connect redroid:5555
- watch-adb.sh kas 3 min (cron) + @reboot start-demo.sh

index.html

- Auto stream redirect (!action=stream, player=mse)
- POST /demo-reset fone (sesijos valymas)
- Redirect iškart — ne laukiant reset (kitaip rodo device list)

Sesijos reset

pm clear + app restart → login. demo-reset-server.py pagal Host header.

5. Caddy routing

1. WebSocket → ws-scrpcy be auth
2. /embed* → be auth, CSP frame-ancestors kantrybes.lt
3. /demo-reset → Python :9003
4. Kita → basic auth

6. Portfolio (kantrybes.lt/dev)

- DB: live_type ENUM('web','app')
- Live app → telefono modalas + /embed/
- Live web → platus modalas, pilnas URL
- DJBook + Dishcovery = app; Steam AI ir kt. = web

7. APK info

App	Package
Dishcovery	com.dishcovery.app
DJ Book	com.tkestas92.djbookmobilev2

DJ Book backend: djbook-backend-production.up.railway.app

8. Žinomos problemos

- **Foto DJ Book:** Railway uploads ephemeral → 404. Fix: Volume arba S3.
- **Shared session:** vienas redroid visiems lankytojams; reset ant naujo visit.
- **ADB:** atsijungia po restart — watchdog taiso.

9. Cron

```
@reboot sleep 45 && .../dishcovery/start-demo.sh
@reboot sleep 60 && .../djbook/start-demo.sh
*/3 * * * * /opt/android-demo/watch-adb.sh
```

10. VPS komandos

```
docker ps | grep -E 'dishcovery|djbook'
docker exec ws-scrpy-djbook adb devices
/opt/android-demo/apps/djbook/connect-adb.sh
systemctl reload caddy
```

11. Chronologija

Deploy → SSH fix → subdomains → DJ Book → MSE player → session reset → ADB watchdog → embed modal → live_type app/web → git push.

12. Deploy map

Kas	Kur
android-demo	VPS /opt/android-demo/
Caddy	/etc/caddy/Caddyfile
Portfolio	Git → Railway
APK	Rankiniu būdu ant serverio
